

Microblading Before Care, Healing and Aftercare Advice

The eyebrows truly frame the face. Creating new brows or enhancing those existing brows can give you that instant boost, making you look younger and elevating your confidence. Keeping those brows in good condition and aiding in the retention is up to you! Treat your brows delicately after the Microblading process for the best, longest retention and results.

Procedure

Like any cosmetic procedure, this is a building process. Please do not expect immediate results. This will take at least two sessions (four weeks apart) to fully love your new brows. After the procedure, the area treated will look much darker and more defined than the final results. The color will fade by 40 percent after the first session. This is standard for all Microblading clients. The color and overall appearance will be softer and more natural after the healing occurs. It will take time for this transition, based on how quickly the outer layer of your skin exfoliates. Usually the exfoliation process occurs for about 5 days and will be complete at about day 7. Results should last approximately 12 months, at that time, some clients might need an additional service.

Eyebrow Before Care

- Patients prone to cold sores/fever blisters should take an anti-viral prior to treatment.
- Chemical and laser peels should be avoided for at least 6 weeks prior to procedure.
- Botox, AHA products and retinoids should be avoided for 2 weeks prior to the procedure.
- No electrolysis for at least 5 days before the procedure.
- Do not take Aspirin, Niacin, Vitamin E, Ibuprofen, NSAID's or blood thinners 48 hours before procedure.
- No alcohol the day before and day of the procedure.
- Do not work out the day of the procedure.
- Do not tan or come with a sunburned face.
- No waxing or tinting of eyebrows 3 days before procedure.

Eyebrow Aftercare (dry-heal)

- Discontinue use of any brow-growth serums like Latisse, as it can affect pigment.
- No water, cleansers, creams, makeup or any other products on treated area for four weeks.
- Do not rub, pick or scratch the treated area. Let any scabbing or dry skin naturally exfoliate off.
- Avoid direct sun exposure or tanning for four weeks after procedure.
- No facials, Botox, chemical treatments and Microdermabrasion for 4 weeks after procedure.
- Try to avoid sleeping on your brows for two weeks.

Eyebrow Microblading is not recommended for Clients who are or have:

- Pregnant or nursing
- Undergoing Chemotherapy (consult your physician)
- Bacterial/Viral infections and/or other infectious diseases
- Epilepsy (consult your physician)
- Pacemaker or major heart conditions
- Skin irritation or Psoriasis near the treated area (rashes, sunburn)
- Had Botox in the past two weeks
